TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, PHP, C#, SQL

Frameworks & Libraries: React, Next.js, Tailwind, Node.js, Express.js, Spring Boot, Laravel

Cloud & DevOps: Linux, Docker, GitHub Actions (CI/CD), AWS, cPanel, Vercel, Render, Cloudflare, Supabase

Tools: Git, Maven, Postman, IntelliJ Idea, MySQL, VS Code, Codex, PostgreSQL, MongoDB

WORK EXPERIENCE

Philippine Coconut Authority (Full-Stack Developer - Technical Staff) **December 2024 – Present**

- Led the migration of **3 internal systems** from **Laravel** to the standardized **Next.js** and **Node.js** architecture.
- Owned audit applications end to end, from requirements and secure workflows to deployment and support.
- **Internal Audit Management Portal** | [Website](#) **Laravel | React JS | MySQL**
 - Built and deployed a **centralized audit portal** supporting 20 configurable questionnaires and **100+ submissions across 17 regions**, replacing manual data collection with role-based workflows.
 - **Digitized the department's evidence-gathering workflow** by implementing role-based access, protected document handling, status-based approvals, submission tracking for sensitive audit records.
- **Permit Compliance Audit Platform (RA 8048)** **Next.js | TypeScript | Node.js | PostgreSQL**
 - Built and deployed an **audit analytics platform** that consolidated **2,000+ permit records** from fragmented spreadsheets into a structured **PostgreSQL** database.
 - Translated complex audit criteria into reusable queries and dashboards that surfaced missing requirements, duplicate permits, cancelled applications, and regional compliance issues.

Philippine Coconut Authority (Full-Stack Developer Intern)

March 2024 – July 2024

- **National Oil Palm Farmer Registry System (NOPFRS)** **PHP | JavaScript | MySQL**
 - Designed a fully normalized MySQL schema consisting of **12 interconnected tables** to accurately map complex agricultural data, including farmer socioeconomics, farm metrics, and machinery inventory.
 - This core registry infrastructure actively utilized by PCA Project Management Office to track, verify, and distribute **nation-wide** health and medical benefits to oil palm farmers.
 - Implemented **five-role RBAC model with public guest access** separating data entry, validation, regional oversight, and system administration.

PROJECTS

PUP Find (Thesis Project) | [Website](#) | [Github](#) **MongoDB | Express | React | Node.js | WebSocket**

- Designed and developed a centralized administrative application to manage the full lifecycle of **lost-and-found platform** with integrated **verification workflows** enable admins to **authenticate ownership claims, item recovery and administrative review**.
- Integrated real-time **WebSocket messaging** for user-admin communication for **100+ students** across campus which **streamlines the process** in terms of searching, reporting, and documentation.

Library Management System | [Github](#) **Java | Spring Boot | Next.js | Docker | PostgreSQL**

- Developed a full-stack library system utilized **PostgreSQL** for data storage, **Spring Boot** for RESTful API and **Next.JS** for the user interface.
- Engineered an automated CI/CD pipeline using **GitHub Actions** and containerized the system with **Docker** to streamline the build process and guarantee consistent environments.

EDUCATION

POLYTECHNIC UNIVERSITY OF THE PHILIPPINES

2020 – 2024

BS in Information Technology

GWA: 1.32

Relevant Coursework: System Administration and Maintenance, Software Engineering, Project Management
