TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, PHP, HTML, CSS, Bash

Frameworks: React, React Native, Next.js, Tailwind, Node.js, Express.js, Spring, Laravel

Developer Tools: Git, Github, VS Code, Linux, Docker, AWS, Postman

Databases & Brokers: MySQL, PostgreSQL, Supabase, MongoDB

WORK EXPERIENCE

Philippine Coconut Authority (Fullstack Developer - Technical Staff)

December 2024 – July 2026

- **Internal Audit Department System** | [Website](#) **Laravel** | **React JS** | **MySQL** | **CPanel**
 - Designed and deployed a **centralized audit management portal** using **Laravel** and **React**, replacing disjointed manual data collection across multiple regions with a dashboard for compliance auditing.)
 - **Digitized the department's evidence-gathering workflow** by engineering dynamic, role-assignable questionnaires, establishing a single source of truth that eliminated manual data compilation and drastically reduced audit turnaround times.
 - Handled end-to-end development: designed and built the frontend interface, developed backend logic and APIs, structured the database architecture, conducted testing, and deployment.
- **RA 8048 Audit Tool** | [Website](#) **Next.js** | **TypeScript** | **Prisma** | **PostgreSQL** | **Docker** | **Vercel**
 - Developed a **production-ready audit tool** to centralize permit-to-cut application records, required document tracking, status classification, and regional compliance reporting for internal audit review.
 - Built interactive dashboards and report pages for missing documents, application summaries, fee mismatches, duplicate PTC numbers, cancelled records, and regional compliance analysis.
- Led the migration of internal applications from **Laravel** to the standardized **Next.js** stack.
- Owned audit applications end to end, from requirements and secure workflows to deployment and support.

Philippine Coconut Authority (Fullstack Developer Intern)

March 2024 – July 2024

- **Oil Palm Farmer Registry System (OPFRS)** **PHP** | **Javascript** | **MySQL** | **CPanel**
 - Designed a fully normalized MySQL schema consisting **12 interconnected tables** to accurately map complex agricultural data, including farmer socioeconomics, farm metrics, and machinery inventory.
 - The core registry infrastructure actively utilized by PCA to track, verify, and distribute **nation-wide** health and medical benefits to oil palm farmers.

PROJECTS

PUP Find (Thesis Project) | [Website](#) | [Github](#)

MongoDB | **Express** | **React Js** | **Node.Js** | **Websocket**

Fullstack Developer and Web Designer

- Designed and developed a centralized administrative application to manage the full lifecycle of lost-and-found reports, integrating **verification workflows** enable admins to **authenticate ownership claims** and item recovery.
- Integrated real-time **WebSocket messaging** for user-admin communication for **100+ students** across campus which **streamlines the process** in terms of searching, reporting, and documentation.

Library Management System | [Github](#)

Java | **Spring Boot** | **Next.Js** | **Docker** | **PostgreSQL**

- Utilized **PostgreSQL** for data storage, **Spring Boot** for RESTful API and **Next.JS** for the user interface.
- Engineered an automated CI/CD pipeline using **GitHub Actions** and containerized the system with **Docker** to streamline the build process and guarantee consistent environments.

EDUCATION

POLYTECHNIC UNIVERSITY OF THE PHILIPPINES - BS Information Technology

2020 – 2024

Relevant Coursework: System Administration and Maintenance, Software Engineering, Project Management
