TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, PHP, C, C++, Dart, HTML, CSS
Frameworks: React, React Native, Next.js, Tailwind, Node.js, Express.js, Spring, Laravel
Developer Tools: Git, Github, VS Code, Linux, Docker, AWS, Postman
Databases & Brokers: MySQL, PostgreSQL, Supabase, MongoDB, Kafka

WORK EXPERIENCE

- Philippine Coconut Authority (Technical Staff)** **December 2024 – April 2026**
- **Internal Audit Department System** | [Website](#) **Laravel | React JS | MySQL**
- Architected and deployed a centralized audit management portal using **Laravel** and **React**, replacing disjointed manual data collection across multiple regions with unified, dashboard for compliance auditing.
 - Handled end-to-end development: designed and built the frontend interface, developed backend logic and APIs, structured the database architecture, conducted testing, and deployment.
 - Digitized the department's end-to-end evidence gathering by developing, assignable questionnaires, establishing single source of truth that streamlined audit tracking and eliminated manual compilation.
 - Secured sensitive audit data by implementing **Role-Based Access Control (RBAC)**, cryptographic hashing, and isolated file handling outside the public directory.
- Philippine Coconut Authority (Fullstack Developer Intern)** **March 2024 – July 2024**
- **Oil Palm Farmer Registry System (OPFRS)** **PHP | Javascript | MySQL**
- Developed **OPFRS** from scratch, used for keeping records of oil palm farmers in the Philippines.
 - Implemented a dashboard that generates graphs and reports about the farmers' information.
 - Resolved critical system crashes by implementing server-side processing (DataTables) to efficiently paginate and render **2.7 million farmer records** in under **10 seconds**; this optimized data-handling architecture was subsequently adopted department-wide for all large-scale registries.

PROJECTS

- PUP Find (Thesis Project)** | [Website](#) | [Github](#) **MongoDB | Express | React Js | Node.js | Websocket**
Fullstack Developer and Web Designer.
- Developed a centralized administrative application to manage the full lifecycle of lost-and-found reports, integrating **verification workflows** enable admins to **authenticate ownership claims** and item recovery.
 - Integrated real-time **WebSocket messaging** for user-admin communication for **100+ students** across campus which **streamlines the process by 40%** in terms of searching, reporting, and documentation.
- Ecommerce Microservice** | [Github](#) **Next.js | Docker | PostgreSQL | Node.js | Kafka | Razorpay**
- Architected a scalable **Event-driven platform** via **microservices architecture** to handle asynchronous transactions and high traffic volumes.
 - Decoupled domain operations by integrating **Kafka** as a distributed message broker between **Node.js** services, ensuring fault-tolerant layer for a seamless inventory management and order fulfillment.
- Library Management System** | [Github](#) **Java | Spring Boot | Next.js | Docker | PostgreSQL | Stripe**
- Utilized **PostgreSQL** for data storage, **Spring Boot** for RESTful API and **Next.js** for the user interface.
 - Engineered an automated CI/CD pipeline using **GitHub Actions** and containerized the system with **Docker** to streamline the build process and guarantee consistent environments.

EDUCATION

POLYTECHNIC UNIVERSITY OF THE PHILIPPINES - BS Information Technology **2020 – 2024**
Relevant Coursework: System Administration and Maintenance, Software Engineering, Project Management
